## NOTICE

August 19, 2015

### TO WHOM IT MAY CONCERN:

Spectra Energy's Algonquin Gas Transmission, LLC will be conducting pipeline operations at the Cromwell Compressor Station beginning August 2015.

In order to complete this work, we must conduct controlled releases of natural gas from various valves along the pipeline.

**Controlled natural gas releases are scheduled to occur at our compressor station located at 252 Shunpike Road in Cromwell beginning Thursday, August 20, 2015, and may continue for several days.**

Spectra Energy representatives will be at the compressor station to closely manage and monitor the controlled releases. Personnel and equipment will remain at the compressor station until all planned activities for the pipeline operations are completed.

As natural gas is released into the air, there will be a loud, rushing noise that may last several hours. The noise may be accompanied by an odor resulting from the odorant mercaptan, which is injected into the natural gas to make it recognizable for safety reasons.

Natural gas is naturally odorless and is lighter than air. It will quickly rise and dissipate into the atmosphere. The odorant that may linger as minute traces will separate from the natural gas that is released.

During the releases, should you hear the noise or smell the odorant, please know that there is no cause for alarm.

Please be advised that your local police and fire departments have been or will be notified of the activities. If you have any questions concerning this procedure, please call me at our Cromwell Area Office at 1-860-894-1600.

Sincerely,

Kyle V. Neilson  
Sr. Right of Way Specialist
